SAFETY SOFTWARE ADDS LAYERS OF INSIGHT FOR STRATA

Strata is a regional housebuilder operating throughout the Midlands and North of England. **Strata** has adopted Work Wallet's digital health and safety tools to manage safety on site more efficiently.

IDENTIFYING THE PROBLEM

Strata builds homes over a large geographic area, with multiple sites of all types, sizes, and specifications on the go at the same time. Historically, **Strata** used paper-based systems to manage health and safety checks, which took the safety team a long time to prepare and were less useful and dynamic.

The safety team also did not have full visibility of safety-related incidents that happened on site, making it difficult to track and identify trends, or make meaningful improvements that would address underlying issues. It was also a challenge to manage contractors effectively, resulting in inefficiencies that could hold up the build process.

*"The greatest benefit that **Work Wallet** brings me is the availability of comprehensive real-time data at the touch of my fingertips. I can see across the business, whatever site it is, whatever time it is, everything that's happening. Data collection has increased by 65 percent, enabling us to make key changes and improvements to the business."*

Dean Cowling | Head of Health and Safety

FINDING THE SOLUTION

Strata realised it needed to adopt a modernised way of working, and decided to put in place a digital health and safety management system. Having one overall, connected software platform would give the safety team and senior leaders much improved oversight of what was happening across all its sites, at all times.

Audits & Inspections

Permit to work

Incident & Near Miss Reporting

*"I predominantly use **Work Wallet** to conduct live audits, walking around with the site manager highlighting any issues. We've seen big improvements and benefits, including much clearer and more accurate reporting of incidents and near misses. The data is absolutely phenomenal, and allows us to move forward, focusing on key areas – and the lads on site are really happy with how easy it is to use."*

Nikki Robson | Health and Safety Adviser

DELIVERING THE OUTCOME

The system is simple and easy to use for everyone on site, resulting in high engagement rates. Since implementing **Work Wallet** a year ago, **Strata** has seen a 65% uplift in the amount of data it collects, and improvements in submission quality, filling a substantial gap in its site visibility. Everyone is better informed, so site managers and contractors are more efficient too, delivering cost savings and productivity increases. The safety team intends to introduce Digital Inductions and Safety Briefings soon as well.

"Reports created by the safety team come directly to me, so I can address any issues on site. I can raise and close out incidents, and also sign off contractor permits, allowing me to see exactly what they are doing that day. It's streamlined, it's efficient, and easy to use, with everything in one place. It's on my mobile phone, so I can access and deal with things at any time."

Matt Sparks | Assistant Project Manager
